

Suzuki Alto Head Unit Replacement

1 DIN Head Unit replacement for Suzuki Alto

Written By: Jossef Harush

INTRODUCTION

I've found zero tutorials or references online on how to do this. Hopefully, this simple tutorial helps people who wish to replace their OEM head unit.

Step 1 — removing the bezels

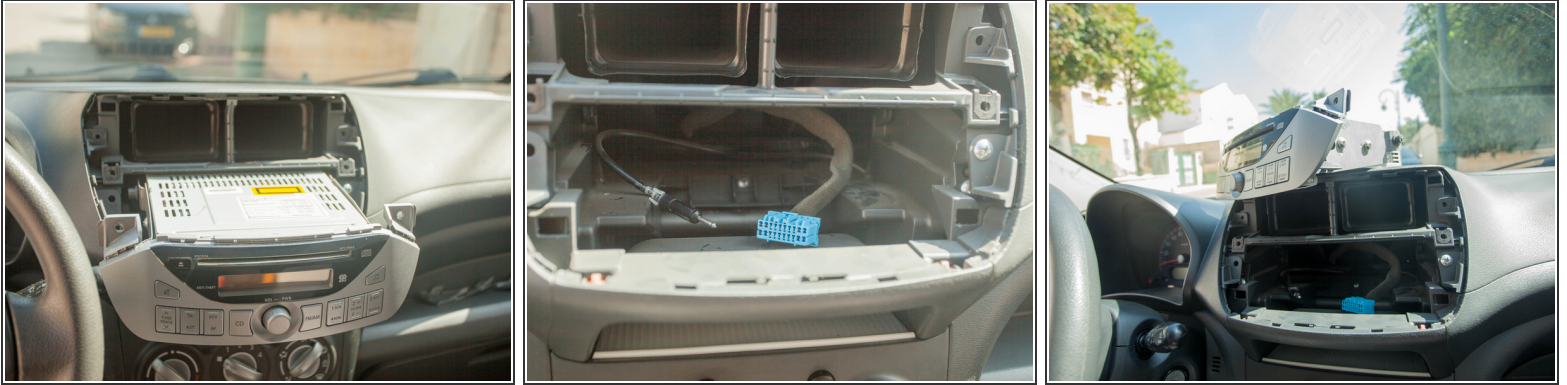

- Use soft disassemble tools to remove the bezels hiding the screws.

Step 2 — removing the AC vents

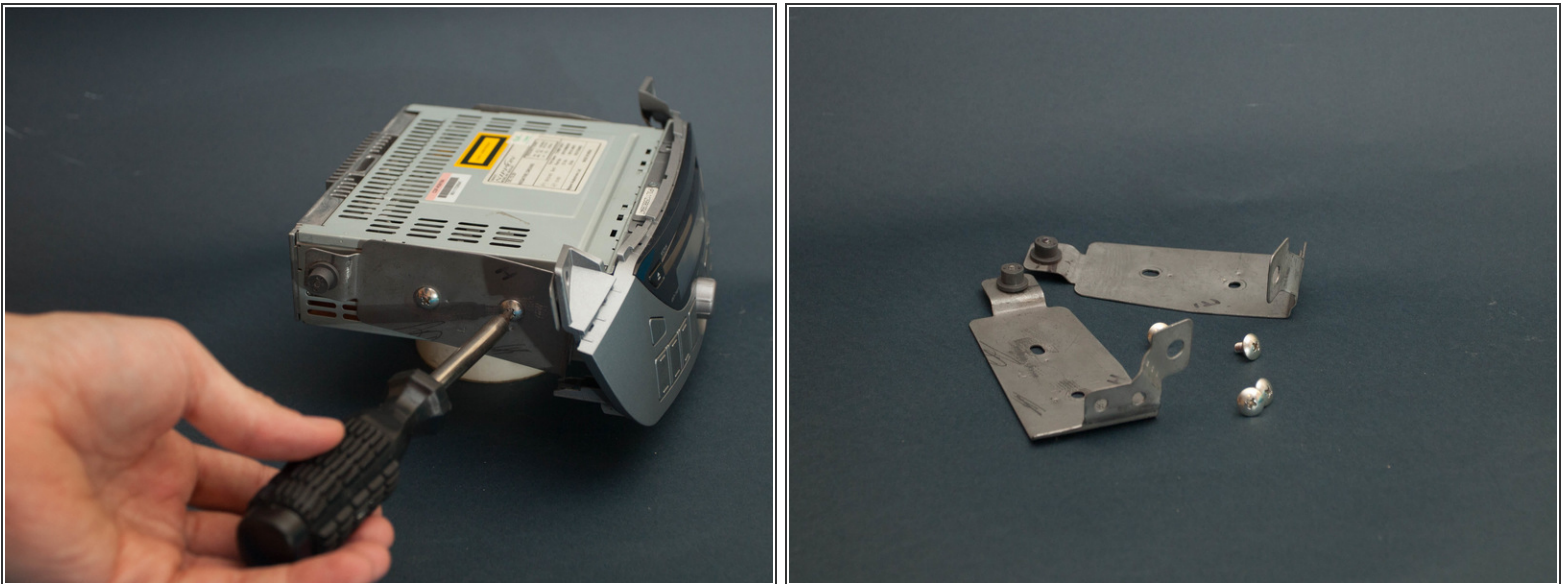

- Pull it like a drawer.

Step 3 — remove the original head unit

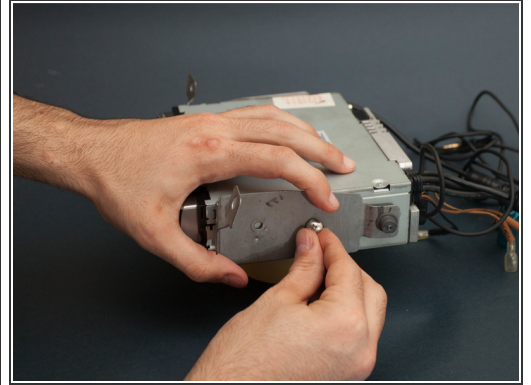

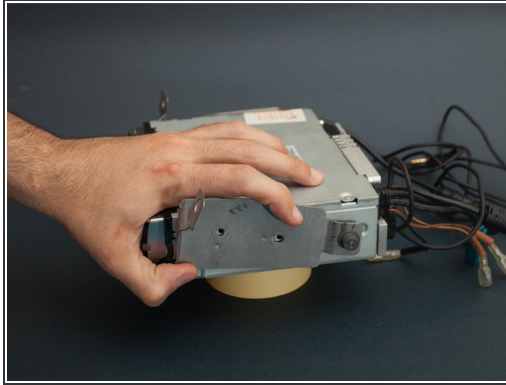

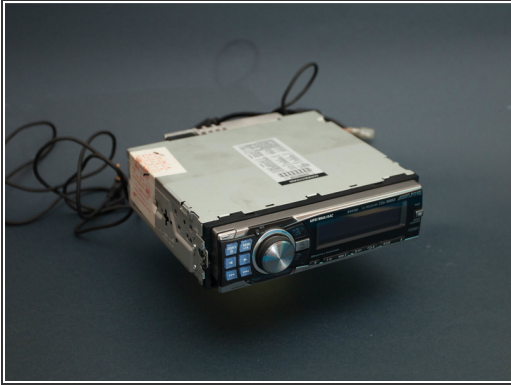

- Disconnect the connectors.

Step 4 — removing the mounting plates

- Unscrew mounting plates from original headunit to custom headunit.

Step 5 — installing the mounting plates

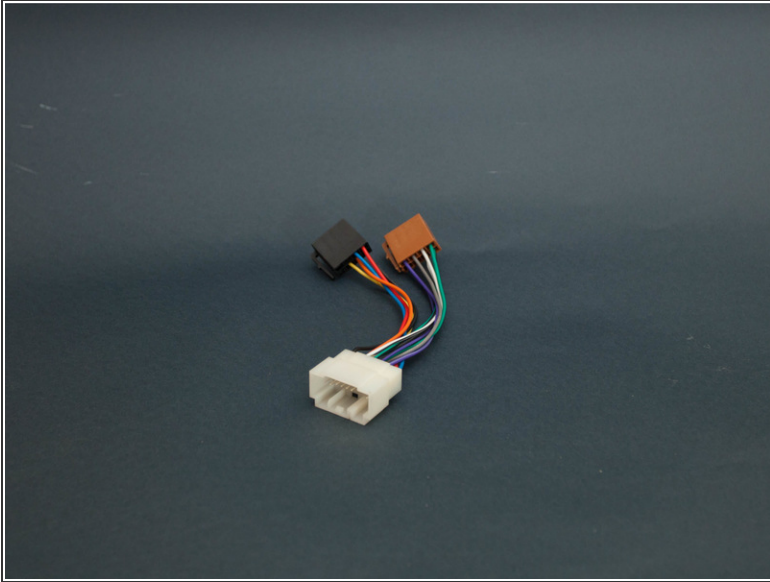

- Screw the mounting plates on to your custom head unit.

Step 6 — add the bezel

- Add the unit's bezel.

Step 7 — connecting the wires

- You will need an adapter from Suzuki's headunit connection to generic connection.

Step 8 — installing the headunit

- Return the AC grill, screws and bezels.
